
2024 Water Quality Report

TRAILS END WATER DISTRICT 2

PWS ID # 89055P

Trails End Water District 2 is contracted with H2O Management Services to provide professional management and operation of the system by qualified personnel. You will see H2O in and about the community as we perform routine preventative maintenance and repairs. Trails End Water District holds an open public meeting on the second Tuesday of each month at 7:00 pm. Working sessions on the last Friday of each month at 4:30 pm are also open to the public. Zoom attendance continues to be available. Please visit our website for how to attend. All in-person meetings are held at the Trails End Community Center at 2411 E Trails End Dr, Belfair. Thank you for giving us the opportunity to serve your community.

Where does my water come from?

Your water source at E 101 Crest Drive is a ground water well at a depth of 397 ft. This well is located at the water tower property owned by Trails End Water District 2. The new well was approved in November 2024 at the same depth.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. **Microbial contaminants**, such as viruses and bacteria, may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife. **Inorganic contaminants**, such as salts and metals, can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming. **Pesticides and herbicides** may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses. **Organic Chemical Contaminants**, including synthetic and volatile organic chemicals, are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems. **Radioactive contaminants**, can be naturally occurring or be the result of oil and gas production and mining activities. In order to

ensure that tap water is safe to drink, the Washington State Department of Health and the U. S. Environmental Protection Agency prescribe regulations which limit the amounts of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) and the Washington State Department of Agriculture regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Variances and Exemptions (Waivers)

In October 2001, an assessment of Trails End Water District 2's source water was done by the Washington State Department of Health to determine the susceptibility of your source to contaminants. This is important because the assessment determined that the susceptibility of your water to contaminants is moderate. Based on this moderate determination, the Department of Health granted Trails End Lake full waivers from Volatile Organic (VOC) and Herbicides & General Pesticides sampling through 2013. A partial waiver was granted for reduced sampling of Inorganics (IOC) through 2019. The newest waiver has been granted through 2028.

Source protection information

Sentry Internet Database is provided by the Washington State Department of Health. Data is available for all community Public Water Systems (PWSs) in Washington. Data for your PWS is online at:

fortress.wa.gov/doh/eh/portal/odw/si/Intro.aspx

When you get to this site, enter TEWD water system ID: 89055.

If you don't have access to the Web, we encourage you to use the Internet service available through the public library system.

Water Quality Data Table

During 2024, Coliform tests were conducted monthly. There was one period exceedance due to a break in the water main. All test results can be located on the Department of Health's website at <https://fortress.wa.gov/doh/eh/portal/odw/si/Intro.aspx>.

The table below lists the most recent drinking water contaminants tests. None of the tests were required during the calendar year January 1 thru December 31, 2024. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old.

Contaminants	MCL	MCLG or AL	Your Water	# Samples Exceeding MCL/AL	Sample Date	Violation or Exceeds AL	Typical Source
Inorganic Contaminants							
Nitrate [measured as Nitrogen] (ppm)	10	10	<.5	NA	6/6/24	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Copper — action level at consumer taps (ppm) 90 th Percentile Results	NA	1.3 AL	.40	0 of 5	9/25/24	No	Corrosion of household plumbing systems; Erosion of natural deposits
Lead — action level at consumer taps (ppb) 90 th Percentile Results	NA	15 AL	1	0 of 5	9/25/24	No	Corrosion of household plumbing systems; Erosion of natural deposits

Important Drinking Water Definitions

MCL: Maximum Contaminant Level: This highest level of a contaminant that is allowed in drinking water. MCLs are set as close as feasible using the best available treatment technology

MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety

AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Lead & Copper 90th Percentile (90th %): Out of every 10 homes sampled, 9 were at or below this level.

About Nitrate

Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask for advice from your health care provider.

About Lead in Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Trails End Water District 2 is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>

Este informe contiene informacion importante acerca de su agua potable. Haga que alguien lo traduzca para usted, o hable con alguien que lo entienda. (English translation: This report contains important information about your drinking water. Have someone translate it for you, or speak with someone who understands it.)

From the Commissioners:

Your commissioners have working through the year to keep TEWD2 a self-sustaining, efficient and effective system. Some of the highlights of 2024 are as follows:

- **The district provides an on-line report to the Washington State Auditor's Office annually. Our 2024 on-line document is now available for review on the Auditor's website. Every three years, that office does a complete audit of the district's records. That audit was conducted for 2021 – 2023 this year. There were a few recommendations made but no significant findings. Their report will also be published on the Auditor's website when it is completed.**
- **All meetings remain open for in-person attendance. In consideration of members of the public who cannot attend in person, meetings can still be attended by ZOOM. Instructions for virtual attendance are on the website.**
- **Progress continues toward bringing Source Four (SO4), our second well, on line. One of the requirements is an updated 20-year Plan. During 2024 that plan was finally completed. It is quite lengthy and detailed and has been approved by the Department of Health. A link to the report will be available on our website when it is available. It will also be available for review at the district office. If you choose to review it in person, please contact the office to schedule an appointment.**
- **The District is continuing the process of updating all meters and has established a schedule for replacement of meters as they age. New meters will be more accurate and easier to read.**
- **Additional information and news is frequently included in your bill or printed on the back. As always, please feel free to contact the office for additional information or questions. Also, visit our website where you will find copies of resolutions, meeting schedules and minutes of meetings as well as additional reports as they become available.**
